

Relevant data, anytime

Always up to date. With Sontex radio modules.

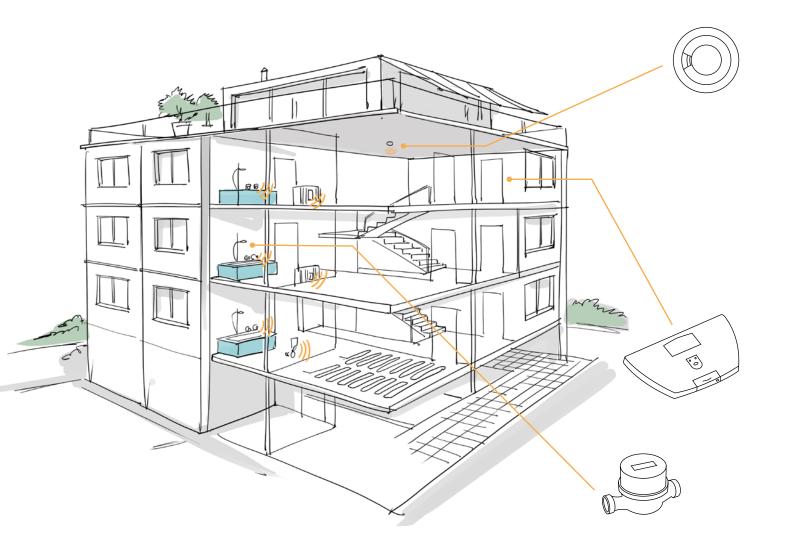

The perfect complement

Sontex is continuously enhancing its product range and supports innovative networking of home automation devices.

Radio modules and electronical water meters complete Sontex' product portfolio. They are an ideal complement – for example to our radio heat cost allocators – and can of course be read out with the same devices.

Radio modules can easily be retrofitted to existing installations, as to water meters or smoke detectors. In an instant, all relevant data can be read out remotely; thus, providing transparency and reliability in home and building automation and in system technology. Monitoring and coordinating these systems are the basis of modern building automation. Sontex increases your convenience by offering an automated reading through the Superlink C Gateway and the WEB Platform Sonexa. The great flexibility and broad product range make Sontex the preferred partner of billing services, building managers and energy suppliers.

Upgrade – at any time

Sontex battery-powered radio modules record, store and transmit consumption rates from water meters or the states of selected detectors. They can be upgraded at any time without affecting the existing calibration.

In addition to accumulated volumes and the volume on the reporting date, water-meter radio modules also store 15 months of values, battery operating hours and housing open-

ings. More recent models are password-protected and offer AES-128 data encryption.

Sontex' bidirectional radio system allows the parameterisation of the device as well as the reading of consumption values with a mobile reader, or directly from the accounting centre through our Superlink C Gateway in the building.

Supercom 581

For Wehrle Modularis water meters. Bidirectional Radio.

Supercom 587

For Wehrle Modularis. Standardised and unidirectional transmission using a wM-Bus.

M-Bus

Supercom 582 For Elster's water meters.

Superaqua 1

Electronic water meter with Sontex Radio, wM-Bus or LoRaWAN transmission.

Supercom W2-L

For Elster's water meters. LoRaWAN transmission.

LoRa

Smoke Alarm SA-2

The Supercom Ei6500- SA2-R or -SA2-O is a smoke alarm for remote inspection in accordance with the inspection method C defined in DIN 14676-1.

Supercom W1-L

For Wehrle Modularis. LoRaWAN transmission.

LoRa

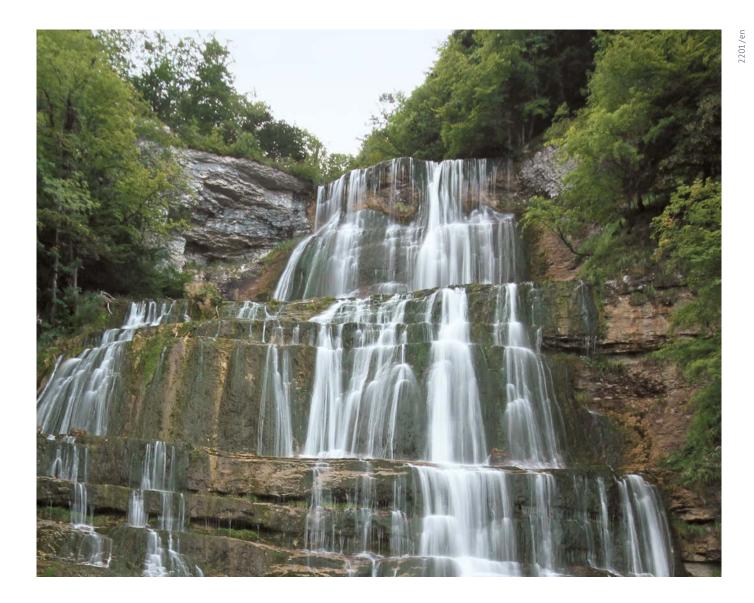

Supercom 583 For Allmess' water meters.

Supercom 323/327

For smoke alarms from Ei Electronics. Indicates whether the smoke alarm is operational. The module is available in two radio versions: Sontex or wM-Bus. and complies with the method B test defined in DIN 14676-1.

"The broad range of communication products in combination with our Superlink C Gateway and Sonexa Platform give you highly flexible access to your data."
