

# Supercal 5 S

## Static Thermal Energy Meter

### Application

The Supercal 5 S is Sontex's next-generation thermal energy meter, succeeding the well-known Superstatic 440. This new series is characterised by state-of-the-art multi-functional technologies, is based on a user-friendly modular concept and fully meets customer specific needs as simplified system integration, tariff and data logger functions, universal data transfer and connection to system processors.

Because the design of the Supercal 5 S aim at a high degree of flexibility while keeping future standards in mind, it is ideally suited as a heat or cooling meter, as well as a combined heat/cooling meter. The additional pulse inputs allow the connection of hot or cold water, gas, oil, and electricity meters.

Thanks to its extensive range of options for data communication, as well as its flexibility for collecting and recording dynamic plant data, the Supercal 5 S also lend itself well to applications in district heating networks and industry installations.

### Design

The Supercal 5 S heating and cooling thermal energy meter consists of the fluidic oscillator flow sensor, a battery or mains powered calculator and a pair of temperature sensors Sontex 460. Consumption values can easily be read over the display, or over the Software Superprog Windows or Superprog Android. Communication interfaces like optical probe, NFC, M-Bus, BACnet, Modbus, bidirectional SONTEX radio, wM-Bus or LoRaWAN are also available.

## Temperature Sensor Pair

The temperature sensors in combination with the Supercal 5 S are Pt 500. The temperature sensors are paired. They are always supplied in pairs and must not be separated, extended or shortened. In the case of temperature sensor pairs with a cable longer than 3 m, we recommend the exclusive use of screened temperature sensor pairs.

## Measurement Technique

The calculator Supercal 5 S with mains power supply records every 3 to 30 seconds (depending the flow) the supply and the return temperature, with battery power (D-type battery) every 10 to 30 seconds (depending the flow). The recording of the flow is dependent of the pulse value of the flow sensor and is constantly updated. With the mean flow rate, the temperature difference and the heat coefficient the energy is calculated of the captured medium and displayed on the 128 × 64 pixels illuminated dot-matrix.

## Multifunctional Calculator

### Innovations

- Optimisation of the housing for easier installation
- NFC technology for simplified and user-friendly configuration using Superprog Android.
- Large illuminated dot-matrix display (128 × 64) for improved navigation
- 2 LEDs indicate, in real time, the status of the Calculator
- Fully customisable tariff and data logger functions
- Extended data logging (up to 2 175 entries)
- Modular concept: power supplies, communication & inputs/outputs
- Increased space for cabling

### Features

- Calculator for heat meters, cooling meters or combined heat/cooling meters
- Battery or mains powered for increased flexibility
- Exchangeable calculator upper part while wiring remains in place
- Modules can be retrofitted or replaced at any time without affecting the approval
- Self-recognition of optional modules
- Native M-Bus or two extension slots (BACnet, Modbus, and other)
- Optical interface according to IEC 62056-21:2002
- 2- or 4-wire sensors without any configuration
- 2 pulse/state inputs and 2 pulse/state open drain outputs
- User-friendly menu navigation
- Accuracy better than required by EN 1434

### Optional Power Supply Modules

One plug and play power supply module can be retrofitted, either Ex Works or on site, or replaced at any time without affecting the approval of the calculator. The calculator recognises automatically the following types of power supplies:

- D Battery 3,6 V
- Mains 24 V (12 VAC to 36 VAC or 12 VDC to 42 VDC)
- Mains 230 VAC (110 VAC to 240 VAC, 50/60 Hz)

### Optional Modules

Up to two plug and play modules can be retrofitted, either Ex Works or on site, or replaced at any time without affecting the approval of the calculator. The calculator recognises automatically the following types of modules:

- Analog module with 2 inputs (0..20 mA, 4..20 mA, 0(2) V .. 10 VDC)
- Digital module with 2 inputs (state/pulse)
- Digital module with 2 outputs (state/pulse)
- M-Bus
- BACnet/Modbus

### Data Logger

The calculator's data logger is fully customisable and allows the following recordings:

- Up to 4 totalizer's values
- Average values
- Maximum values
- Event log

The only limitation is given by the available memory, which is 10 kB. Each value takes 4 bytes of storage except the maximum values and the event log values that take 8 bytes. Therefore, up to 2 175 values can be recorded.

### Optional Radio communication

- SONTEX radio
  - Frequency: 433.82 MHz
  - Communication: Bidirectional
  - Protocol: Radian 0
  - Encryption: AES-128
  - Broadcasting performance: 10 mW (10 dbm)
- wM-Bus
  - Frequency: 868.95 MHz
  - Communication: Unidirectional
  - Protocol: Wireless M-Bus according to EN 13757-4
  - Encryption: AES-128
  - Broadcasting interval: Standard 120 sec. (Mode T1/C1, encryption mode 5/7)
  - Broadcasting performance: 25 mW (14 dbm)
- LoRaWAN
  - Frequency: 868.95 MHz, EU868, norme by ETSI (EN300.220)
  - Communication: Bidirectional
  - Protocol: Radian – EN60870-5 (M-Bus)
  - Encryption: AES-128
  - Broadcasting performance: 25 mW (14dBm)
  - Cycle: Standard every 2 hours

## Dimensions

## Compatibility Matrix

Fonction	w/o any <sup>1</sup> Power Supply	D Battery	Mains Operated

# Flow Meter Supercal 5 S

## Fluid Oscillator Flow Sensor: The principle

Picture 1: The main part of the flow passes through a Venturi nozzle in the pipe, creating the differential pressure to bypass the other part of the flow through the fluid oscillator.

In the oscillator the liquid is led to a nozzle and accelerated to a jet. Opposite of the nozzle the jet is redirected to the left or right into a channel that leads upwards to the sensor head equipped with a piezo sensor. The pressure of the liquid on the sensor creates an electrical pulse. The liquid flows back to the pipe through a return loop and redirects the jet into the other channel where the action is repeated and fluid oscillation is created. The frequency of this oscillation is linear proportional to the volume flow. A supplementary benefit is the self cleaning effect due to the oscillating character.

Picture 2: The animated top view on the oscillator shows the differences of velocity of the liquid. The jet accelerated by the nozzle with the highest velocity in red, slow velocity in blue.

Picture 1: Section through the flow sensor

Picture 2: fluidic oscillation with jet (RED)

## Main Features

The thermal energy meters Supercal 5 S are optimized for the measurement and calculation of energy consumption in district heating systems. They are also extremely well suited to use purely as volumetric flow meters for various media.

- Interchangeable measuring head
- Complete range of pipes 1 – 1500 m<sup>3</sup>/h
- Purchase and maintenance costs are reasonable compared with other static flow sensors
- Corrosion resistant materials
- Protection degree of flow sensor IP68
- Threaded and flanged fittings
- Straight sections of piping of 3 DN in flow and return of any flow meter or heat meter must be respected. For the Supercal 5 S up to DN 40 (qp10) the straight sections of piping of 3 DN are already included in the length of the flow sensor
- No moving parts, therefore no wear
- Not sensitive to dirt
- Stable
- For horizontal, upstream and downstream pipes, independent mounting position
- Common spare parts qp 1 – 1500 m<sup>3</sup>/h
- Dynamic range: 1:100 at qp 1 – 25 m<sup>3</sup>/h  
1:50 at qp 40 – 400 m<sup>3</sup>/h  
1:25 at qp 800 – 1500 m<sup>3</sup>/h
- Direct pick-up of voltage pulses without reflectors
- Measurement independent of medium
- Long-term, stable, accurate and reliable measurement, even with poor water quality
